

**The Human Baguettes**

**Wildlands**

**Cashton, Leo, Carter**

**Emily Stangel, Alexa Hurd**

**List of Machine Steps** | Clearly describe and number machine steps. Advanced Component steps clearly identified.

### Steps

#1. The pry bar falls and sets off the mousetrap

#2. The mousetrap goes off and pulls a ball off of its stand

#3. The ball hits a golf ball and gives it forwards momentum

#4.

#5.

#6

#7

# Reflection

We all worked really hard on this project and we all had a fun working together and building. We had some challenges with this project. Getting the vinegar to tip when we wanted it to tip but not when we didn't want it to. Overall we thought this project was a good learning experience.

## Diary of building process, photos, team biography, etc

Our project started of with the pry bar and mouse trap but after regionals we ended up removing all of the unreliable steps to get where we are today our journal we were doing but unfortunately we lost track of it and fell behind

- Day 1 We made towers with newspapers that can hold 2 text books.
- Day 2 got pallets and plywood and made a base for the project.
- Day 3 went and got a pegboard and paint.
- Feb 23, 2024 We painted our pallets and explored different ideas.
- Mar 18, 2024 added pulleys and explored other ideas.
